

Remedios Navarro, M.D.
Cardiologist

Aruga Medical
123 Anywhere St. Any City

Patient's Name: John Doe

Sex: M **Age:** 24 **Date:** 7/4/24

Reported Symptoms:

Increased thirst (polydipsia), frequent urination (polyuria), extreme hunger, unintended weight loss, fatigue, blurred vision, slow-healing wounds, or numbness in extremities.

Comments:

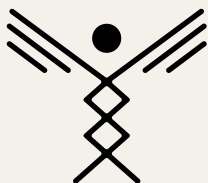

- Diabetes is confirmed based on A1C.
- Potential complications identified:
- [early signs of neuropathy, retinopathy, nephropathy, or cardiovascular risks].
- Lifestyle factors, such as obesity or sedentary habits, are contributing to the condition.

Final Diagnosis:

- Primary Diagnosis: Diabetes Mellitus [Type 1, Type 2, Gestational, or Secondary].
- Severity Level: Controlled.

Advice to the Patient:

Regular screenings for diabetic retinopathy, neuropathy, nephropathy, and cardiovascular diseases.
